

Understanding more about your baby's progress

Motor (or developmental) milestones are a measure of the physical progress your baby makes as they grow

Tracking your baby's movements in the early months of life is very important in helping you to see how well they're developing

The figure below illustrates typical development patterns in the first few months of life, so you can see how your baby is progressing. Every baby is unique and the exact age individual babies reach these milestones may differ

1 month old

When lying on their front, baby can briefly lift their head

Can move hands to their face and mouth

Startle reflex – when baby is startled, such as a loud noise, they throw out their arms and spread their fingers

2 months old

When lying on their front, baby can lift their head and move it side-to-side – may also use arms to push off of the ground

When lying on their back, baby can move and wriggle their arms and legs. As development continues these movements will become smoother

Can briefly hold a toy that is placed in their hands

3 months old

When lying on their front, baby can lift their head and chest

When lying on their back, baby waves their arms and kicks their legs

Beginning to reach out for toys and deliberately grasps and holds items

4 months old

When lying on their tummy they can hold their head straight and look around

When lying on their back they rock from side-to-side

Pushes up to elbows when lying on their tummy

They grab and shake toys in their hands

6 months old

Beginning to sit up without help

Rolls from side-to-side and rolls over front-to-back

Beginning to support their weight on their legs and stand with help

Starts to crawl on their hands and knees

6 months old

Beginning to sit up without help

Rolls from side-to-side and rolls over front-to-back

Beginning to support their weight on their legs and stand with help

Starts to crawl on their hands and knees

9 months old

Crawls on their hands and knees

Can pull themselves up to stand whilst holding onto something

Can stand whilst holding on to something

Beginning to take a few steps whilst holding onto furniture for support

12 months old

Can stand alone without help

Begins to take a few steps alone

Can get into the sitting position alone and sits well

18 months old

Can walk well alone

Starts to walk upstairs and run

Beginning to feed themselves with a spoon, and drink with a cup

If you notice your baby hasn't reached any of these milestones within the expected age range, or they are no longer able to achieve milestones that they previously could, speak to your doctor immediately
